

Important information about re-fuelling on the Alastaro Circuit!!!

Dear Competitors,

In my discussions with the government officials and neighbors of the Circuit, I have promised to make some arrangements. The matters are easy to take care of and will have a significant impact on the safety for the preservation soil and water in the area as well as the users.

FUEL and other LIQUIDS

Fuel and other liquids may NOT be stored in containers that are in direct contact with the ground, not even asphalt. This rule is also enforced in all FIA and FIM competitions. Fuel or other liquids may not be stored in tents, used as weight or other non purposeful locations.

Fuel and other liquids must be stored in the Service vehicles (vans, truck, trailers) or must be placed in a safety container, which volume is bigger then the liquids stored together.

This is really easy to execute and follow and will improve the environmental safety greatly!

Also all liquids must be stored in a shaded place to avoid building up pressure due to the heat of the sun

Re-FUELLING the cars.

When re-fueling the car, an impermeable tarpaulin must be used.

Especially for this purpose I have designed and manufactured special protectors for re-fuelling cars. The protector has raised edges, so that if fuel is spilled, it will be contained on the protector.

The price should not be a problem and the protector will last for a long time.

Fuelling containers and protectors are available for sale in the Service Area, size 3x6m for the price of 170,- EUR. Orders can be made by phone +358 400 804028.

We have increase the asphalt covered area in the Service Area, so every car can be always located on asphalt.

All vehicles (with a permit), either being Competitor, Official, Mechanics or other people in the area, must park their car in the designated areas as given by the Competition organisers

I would like to Thank You for keeping strictly to these rules and keeping the environment clean!

Mr. Tero Tupala,
Alastaro Circuit
